Product Description

gb model for 1Cr18Mn8Ni5N.200 series stainless steel belongs to low nickel high manganese stainless steel

Stainless steel sheets are thin, flat pieces of stainless steel with many applications. They are manufactured through hot or cold rolling, compressing stainless steel into thin sheets with a consistent thickness. They are composed primarily of iron, along with a minimum of 10.5% chromium, which forms a protective oxide layer on the surface, known as the passive layer. This passive layer makes stainless steel sheets resistant to rust, staining, and corrosion caused by exposure to moisture, chemicals
