## Product Description

### AISI 2B 304 Stainless Steel Sheet DIN ASTM SS410 SS409 SS420

304 stainless steel is a common material in stainless steel, with a density of 7.93 g/cm<sup>3</sup>, also known as 18/8 stainless steel in the industry. High temperature resistance of 800 °C, with good processing performance and high toughness, widely used in industrial and furniture decoration industries, as well as food and medical industries. 304 is a versatile stainless steel widely used in the production of equipment and components that require good comprehensive performance (corrosion resistance and formability). In order to maintain the inherent corrosion resistance of stainless steel, steel must contain more than 18% chromium and more than 8% nickel. 304 stainless steel is a grade of stainless steel produced according to the American ASTM standard.
