Product Description

Hot Rolled Decorative Golden BA 0.2mm 316 Stainless Steel Sheet Customized Processing AISI SS Stainless Steel Plate

316 stainless steel has excellent corrosion resistance in many environments. It gives good service in atmospheric conditions, resisting most environments and is often used in marine conditions, or where industrial pollution is heavy. Best appearance is maintained where the design allows even rain washing of the surface, or where dirt deposits are occasionally washed off the steel.

Grade 316 also has given excellent service in potable water. Pitting and crevice corrosion may occur in waters with higher chloride content, and 2000 ppm is accepted as the upper limit. The higher molybdenum content of 316 make it significantly more corrosion resistant than 304
